

## **AMENDMENT(S) TO THE SPECIFICATION**

**Please delete the paragraph beginning at page 4, line 5, as shown as follows:**

~~Advantageous embodiments of the invention are described in subclaims 2 to 7.~~

**Please replace the paragraph beginning at page 4, line 17, and previously amended in the Amendment filed herein on February 27, 2006, with the following rewritten paragraph:**

According to another feature, the ~~[[The]]~~ cage is to have a W- or A-shaped configuration, the webs of which are formed, adjoining the side rings, by sections that extend in parallel, lie inside the pitch circle and are continued by two sections that extend obliquely to the cage axis and combine to form a section that extends in parallel and lies outside the pitch circle, the stub-shaped webs being arranged so as to lie inside the pitch circle.

**Please replace the paragraph beginning at page 4, line 25, with the following rewritten paragraph:**

According to ~~claim 5~~ another feature, the cage has an M- or V-shaped configuration, the webs of which are formed, adjoining the side rings, by sections that extend in parallel, lie outside the pitch circle and are continued by two sections that extend obliquely to the cage axis and combine to form a section that extends in parallel and lies inside the pitch circle, the stub-shaped webs being arranged so as to lie outside the pitch circle.

**Please replace the paragraph beginning at page 5, line 11, with the following rewritten paragraph:**

Finally, ~~claim 7 discloses in~~ another variant of the cage~~[[.]] According to this,~~ provision is made for it to have an M- or V-shaped configuration, the webs of which are formed, adjoining the side rings, by sections that extend in parallel, lie outside the pitch circle and are continued by two sections that extend obliquely to the cage axis and combine to form a section that extends in parallel and lies inside the pitch circle, the stub-shaped webs being arranged so as to lie inside the pitch circle and starting from a projection that points radially inward and branches off from the side rings.
